Membuat Halaman Beranda

- Pada folder **pages** buat sebuah folder dengan nama **beranda** kemudian pada folder **beranda** tersebut, buat file 5 buah yaitu **mobil_list.dart, tombol_pesan.dart, mobil_card.dart, search_field.dart** dan **beranda_page.dart**.

Copyright © September 2025

- Pada file **mobil_list.dart** ketikkan kode berikut

```
List<Map<String, dynamic>> mobilList = [
  {
    "judul": "Heart",
    "harga": "Rp. 300.000",
    "foto": "assets/img/mobil-1.jpg"
  },
  {
    "judul": "Speed",
    "harga": "Rp. 350.000",
    "foto": "assets/img/mobil-2.jpg"
  },
  {
    "judul": "Pat",
    "harga": "Rp. 350.000",
    "foto": "assets/img/mobil-3.jpg"
  },
  {
    "judul": "Nuri",
    "harga": "Rp. 300.000",
    "foto": "assets/img/mobil-4.jpg"
  },
  {
    "judul": "Gani",
    "harga": "Rp. 500.000",
    "foto": "assets/img/mobil-5.jpg"
  },
  {
    "judul": "Tayo",
    "harga": "Rp. 500.000",
    "foto": "assets/img/mobil-6.jpg"
  },
];
```

Copyright © September 2025

- Pada **tombol_pesan.dart** ketikkan kode berikut

```
1.  import 'package:flutter/material.dart';
2.
3.  class TombolPesan extends StatelessWidget {
4.    const TombolPesan({super.key});
5.
6.    @override
7.    Widget build(BuildContext context) {
8.      return Container(
9.        height: 25,
10.       width: MediaQuery.of(context).size.width - 2 * 24,
11.       child: ElevatedButton(
12.         onPressed: (){},
13.         child: Text(
14.           "Pesan",
15.           style: TextStyle(fontWeight: FontWeight.w500, color: Colors.blue),
16.         ),
17.         style: ElevatedButton.styleFrom(
18.             backgroundColor: Colors.white,
19.             shape: RoundedRectangleBorder(
20.                 side: BorderSide(color: Colors.blue, width: 3),
21.                 borderRadius: BorderRadius.circular(6)
22.             )
23.         ),
24.       ),
25.     );
26.   }
27. }
```

- Pada **mobil_card.dart** ketikkan kode berikut

```
1.  import 'package:flutter/material.dart';
2.  import './tombol_pesan.dart';
3.
4.  class MobilCard extends StatelessWidget {
5.    final String judul;
6.    final String harga;
7.    final String foto;
8.
9.    const MobilCard({super.key, required this.judul, required this.harga, required
    this.foto});
10.
11.   @override
12.   Widget build(BuildContext context) {
13.     return Container(
14.       decoration: BoxDecoration(
15.         borderRadius: BorderRadius.circular(8.0),
16.         border: Border.all(color: Colors.grey.shade200),
17.       ),
18.       child: Wrap(
19.         children: [
20.           ClipRRect(
21.             borderRadius: const BorderRadius.only(
22.               topLeft: Radius.circular(8.0),
23.               topRight: Radius.circular(8.0)
24.             ),
```

- Lanjutan Naskah

```
25.             child: Image.asset(
26.                 foto,
27.                 height: 170,
28.                 width: double.infinity,
29.                 fit: BoxFit.cover,
30.             ),
31.           ),
32.           Padding(
33.             padding: const EdgeInsets.all(8.0),
34.             child: Column(
35.               crossAxisAlignment: CrossAxisAlignment.start,
36.               children: [
37.                 Text(judul,style: TextStyle(fontWeight: FontWeight.w700)),
38.                 Text(harga,style: TextStyle(fontWeight: FontWeight.w700)),
39.                 TombolPesan()
40.               ],
41.             ),
42.           )
43.         ],
44.       ),
45.     );
46.   }
47. }
```

- Pada **search_field.dart** ketikkan kode berikut

```
1.  import 'package:flutter/material.dart';
2.
3.  class SearchField extends StatelessWidget {
4.    const SearchField({super.key});
5.
6.    @override
7.    Widget build(BuildContext context) {
8.      return TextField(
9.          decoration: InputDecoration(
10.             hintText: 'Cari Mobil',
11.             prefixIcon: Icon(Icons.search),
12.             border: OutlineInputBorder(
13.                 borderRadius: BorderRadius.circular(3),
14.                 borderSide: BorderSide.none
15.             ),
16.             contentPadding: EdgeInsets.zero,
17.             filled: true,
18.             fillColor: Colors.white
19.         ),
20.     );
21.   }
22. }
```

Copyright © September 2025

- Pada **beranda_page.dart** ketikkan kode berikut

```
1.  import 'package:flutter/material.dart';
2.  import './search_field.dart';
3.  import './mobil_list.dart';
4.  import './mobil_card.dart';
5.
6.  class BerandaPage extends StatelessWidget {
7.    const BerandaPage({super.key});
8.
9.    @override
10.   Widget build(BuildContext context) {
11.     return Scaffold(
12.       appBar: AppBar(
13.         backgroundColor: Colors.blue[900],
14.         title: SearchField(),
15.       ),
16.       body: SafeArea(
17.         child: SingleChildScrollView(
18.           child: Padding(
19.             padding: const EdgeInsets.all(12.0),
20.             child: GridView.builder(
21.               physics: const NeverScrollableScrollPhysics(),
22.               shrinkWrap: true,
23.               gridDelegate: const SliverGridDelegateWithFixedCrossAxisCount(
24.                   crossAxisCount: 2,
25.                   crossAxisSpacing: 12.0,
26.                   mainAxisSpacing: 12.0,
27.                   mainAxisExtent: 250
28.               ),
```

Copyright © September 2025

- Lanjutan Naskah

```
29.                 itemCount: mobilList.length,
30.                 itemBuilder: (_,index){
31.                   return MobilCard(
32.                     judul: mobilList.elementAt(index)['judul'],
33.                     harga: mobilList.elementAt(index)['harga'],
34.                     foto: mobilList.elementAt(index)['foto'],
35.                   );
36.                 }),
37.             ),
38.           ),
39.         )
40.       );
41.     }
42. }
```

Mengubah main_page.dart Agar menampilkan Halaman Beranda

- Buka file **main_page.dart** yang berada pada folder **pages** kemudian ubah menjadi seperti berikut

```
1.  import 'package:flutter/material.dart';
2.  import './beranda/beranda_page.dart';
3.
4.  class MainPage extends StatefulWidget {
5.    const MainPage({super.key});
6.
7.    @override
8.    State<MainPage> createState() => _MainPageState();
9.  }
10.
11. class _MainPageState extends State<MainPage> {
12.   int pageIndex = 0;
13.   List<Widget> pageList = [
14.     BerandaPage(),
15.     Center(child: Text("Halaman Order", style: TextStyle(fontSize: 40))),
16.     Center(child: Text("Halaman Profil", style: TextStyle(fontSize: 40))),
17.   ];
18.
```

- Lanjutan Naskah

- Pada kode diatas dan disamping ada beberapa penambahan kode yaitu kita mengimport file **beranda_page.dart** (baris 2) dan pada array **pageList** index pertama kita ubah untuk menampilkan halaman beranda/**beranda_page.dart** (baris 14).

```
18.
19.   @override
20.   Widget build(BuildContext context) {
21.     return Scaffold(
22.       body: pageList[pageIndex],
23.       bottomNavigationBar: BottomNavigationBar(
24.         type: BottomNavigationBarType.fixed,
25.         onTap: (index) {
26.           setState(() {
27.             pageIndex = index;
28.           });
29.         },
30.         currentIndex: pageIndex,
31.         items: [
32.           barItem(Icons.home, "Beranda"),
33.           barItem(Icons.wallet, "Order"),
34.           barItem(Icons.account_circle_outlined, "Profil"),
35.         ],
36.       ),
37.     );
38.   }
39.
40.   BottomNavigationBarItem barItem(IconData iconData, String title){
41.     return BottomNavigationBarItem(icon: Icon(iconData), label: title);
42.   }
43. }
```

Copyright © September 2025

- Untuk hasilnya pada menu beranda akan muncul sebuah halaman beranda seperti berikut

Copyright © September 2025
